

Addendum for Septic System Management Plan For Type III Septic System

In addition to the Septic System Management Plan for Type I Septic Systems I/we hereby acknowledge that:

The drain field and tank(s) area may be inspected by the County once a year for three years.

A flow measurement device must be installed and weekly cycle counter readings recorded. The County may request to see these readings if the system is surface discharging or if problems occur. Please contact the septic installer if you need help with how to record the cycle counter readings.

Scott County will determine if continued monitoring beyond three years is required due to issues with the system (for example: discharge, repeated alarm events, failure to meet water use limits, or simple system abuse or misuse).

As the owner of this SSTS, I understand it is my responsibility to properly operate and maintain the sewage treatment system on this property, utilizing the Management Plan and Type III addendum. If requirements in this Management Plan and Type III addendum are not met, I will promptly notify Scott County Environmental Services and take necessary corrective actions. I understand it is my responsibility to inform the future property owner of this agreement and that the septic system is a Type III septic system.

I hereby grant permission for the County to access my land to inspect the SSTS as outlined above.
